- ✓ **1/4" THICK STEEL BRACKET PLATES**
- ✓ **DESIGNED FOR 20 PSF WIND LOAD**
- ✓ **STANDARD FEATURES EXCEED INDUSTRY STANDARDS**
- ✓ **BEST VALUE FOR PRICE**

## ROLLING STEEL DOORS

Having the right Rolling Steel Door can make all of the difference in your facility where efficiency, durability and security are necessities. Doors come in the following options to accommodate a variety of applications: non-insulated, insulated and fire rated. Our doors use interlocking slat design with solid insulation inserts which provide consistent density and complete coverage. This helps to conserve energy and save on heating.

Furthermore, the lintel brush, vinyl guide and bottom bar weatherseal work together to reduce air infiltration to prevent drafts. The durable structural angle guides and bottom bar stand up to abuse and can be easily repaired unlike roll formed designs. Steel plate brackets are superior to their stamped steel counterparts. Slats are available in grey prime and power coat from 180 standard colours. Guides and bottom bars come standard in a dark bronze finish. Optional powder coat is available. Can be operated with a chain hoist or motor.

The Platinum Series is our premium line of products. The product line features exclusive product features and enhanced performance.
